

Lot 12 Mangrove Restoration Progress Report**Time Zero Report****OGC Case No.: 08-1930****8/15/09**

Name

Jack Rienks

Address

1921 Neptune Dr., Englewood, FL 34223

Photograph	Position Taken From	Required Information
Position AA: Approaching Area B from the street:	Midway on a line from the large carrotwood tree at the wood fence and the utility pole 48 ft. out from the fence.	Photo AA attached: Area B approaching from street.
Position BB: Close view of Area B approaching from street:	16 ft. out from the fence gate jam. This is 14 ft. toward the street from the first Australian pine stump at the fence.	Photo BB attached: Area B close view.
Position CC: View of mangrove damage area looking east at waterline:	At the low tide water line next to the south most Australian pine in Area B.	Photo CC attached: Area A damage from the west.
Position DD: View of mangrove damage area looking west at waterline:	At the low tide water line just below the oak tree at the east end of Area A.	Photo DD attached: Area A damage from the east.

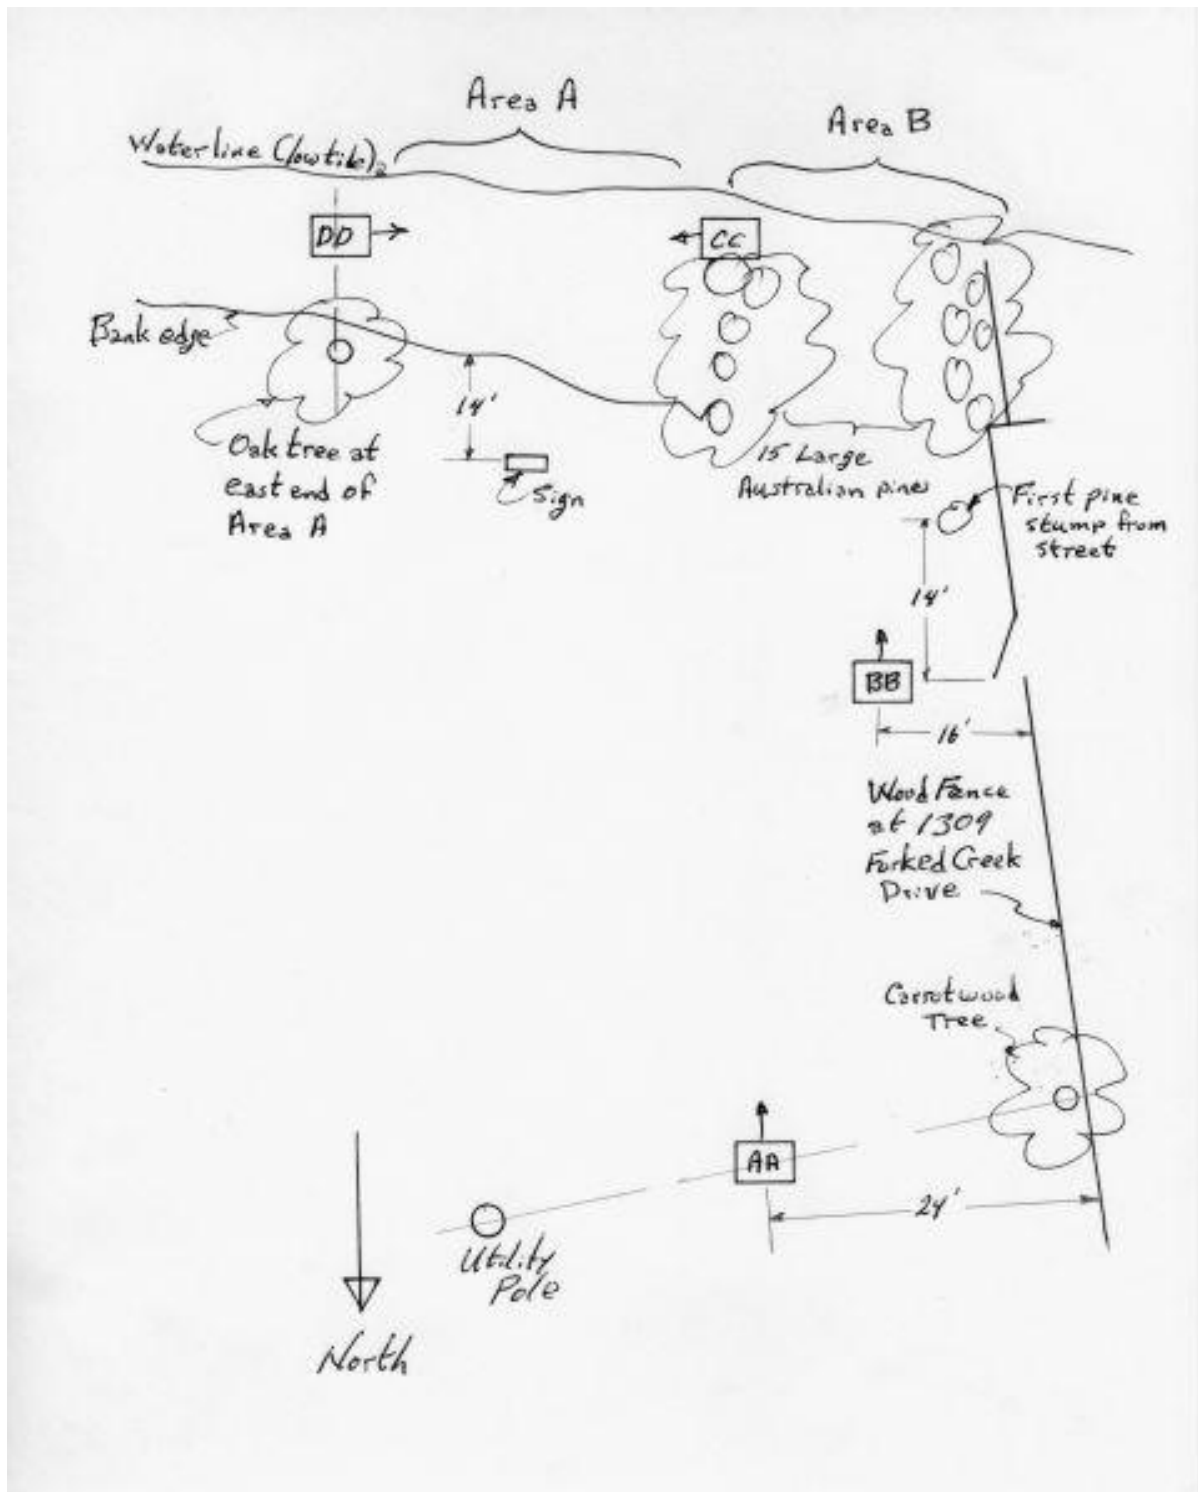

The height of the damaged mangroves ranges from about 4-19 inches. The percentage of cover is estimated to be less than 1 %.

Exotic Vegetation Removal

Area A: All of the small Australian Pines were removed using hand tools and existing shoots and seedlings were sprayed with a systemic brush killer. Pepper trees had been removed earlier and their stumps killed.

Area B: The lower branches of the large Australian pines and the small trees were removed. The large Australian pine branches were removed using power tools, hand tools, and rigging lines. Small trees were removed by hand tools. Shoots and seedlings were sprayed with a systemic brush killer.

Lot 12 Mangrove Restoration Progress Report

Sketch of Areas A and B showing the positions photos were taken from and the dimensions to the reference points. Positions AA and BB were used to show the large Australian pines as Area B is approached from the street. Positions CC and DD were taken at the low tide water line to show the details of the damaged mangroves.

Lot 12 Mangrove Restoration Progress Report

This was taken at a location half way between the carrotwood tree adjacent to the wood fence at 1309 Forked Creek Drive and the utility post 48 ft. out from the fence (location AA on the sketch). It shows the street view of the 15 large Australian pines that dominate Area B. Note that the lower Australian pine branches that were overhanging the mangroves have been removed. This was done by a contractor using chain saws, hand tools, rigging lines, and small trucks.

Lot 12 Mangrove Restoration Progress Report

Taken from position BB.
Area B, close view.

This was taken closer to the large Australian pines to show more detail. It was taken at position BB on the sketch, 16 ft. out from the gate jam post on the wood fence on the adjacent property.

Lot 12 Mangrove Restoration Progress Report

This was taken at position CC, standing just above the low tide water line, leaning against the south most Australian pine at the west end of Area B. It shows the damage area in Area A.

Lot 12 Mangrove Restoration Progress Report

Same area of damaged mangroves as the previous photo but taken from the west at a position just below the oak tree on the bank at the east end of Area A, position DD on the sketch.
